

Book Performance Report 2017

April 2018

Dear Jaya P. N. Bishwal,

This report provides you with an overview of how your eBook performed on SpringerLink in 2017. We would also like to share some tips and services for you.

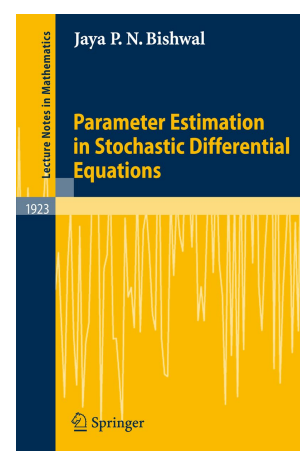

You might be familiar with Bookmetrix, a platform that compiles performance metrics for your books/chapters. Last year we **connected Bookmetrix to your MySpringer account**. While this report shows static, calendar-year data, your account shows you *current* SpringerLink usage data as well as the number of citations, social media mentions and book reviews.

Clicking on one of these metrics takes you to the Bookmetrix page for your book where you can find **benchmarks: how your book compares to the average of other titles published in the same year and discipline**.

Just a reminder, you can access MySpringer [here](#).

Best wishes,

Your Springer Marketing team

Spreading the word about your book

To present your book **Parameter Estimation in Stochastic Differential Equations** to its potential readers and make it findable by search engines, it has its own [home page](#), which can be **shared through social media** and where you can download a flyer for your book! **In 2017 this page was visited 352 times.**

From the reviews:

From the reviews:

"This book deals with a variety of statistical inference problems for stochastic differential equations ... In each chapter the author starts with useful introductory notes clearly describing the specific models and the problems. ... A series of interesting and well commented examples are provided as an illustration. ... Among the readers who can benefit from this carefully written book are researchers and postgraduate students in stochastic modelling; especially those working in areas such as physics, engineering, biology and finance." (Jordan M. Stoyanov, Zentralblatt MATH, Vol. 1134 (12), 2008)

Tips and services

Engage on social media – talk about your book

Are you an active social media user? Remember to talk about your book and share the link to your book with your community. What inspired you to write it? How many downloads did it get last year? Posts about your book can reach potential new readers, and help get it cited and get more reviews.

Find a Springer social media account in your discipline and connect with your community: springer.com/social-media

A photograph of a laptop on a desk. The laptop screen shows the Springer Nature Author Affiliations page. The page has a header with the Springer logo and navigation links like Home, My Profile, My Affiliations, My Publications, and My Metrics. The main heading is 'The Springer Nature Author Affiliations Program'. Below this, there is a paragraph explaining the program's purpose: to help authors identify the most appropriate journal for their work by providing information on the journal's focus, audience, and scope. A section titled 'An easily followable 4-step simple program' contains a flowchart with four steps: 1. Select your journal, 2. Check the journal's focus, audience, and scope, 3. Check the journal's content, and 4. Submit your manuscript. To the right of the laptop, there is a brown ceramic mug on a black coaster. In the background, a desk lamp is visible on the left, and a bookshelf is on the right.

Open access books and funding options

We publish open access books in science, technology, medicine, the humanities and social sciences. Publishing an open access book with us leads to seven times more downloads, 50% more citations and ten times more online mentions on average than publishing a book through the non-open access route. We offer a variety of book types including monographs, edited volumes, proceedings, SpringerBriefs and chapters. In addition to the electronic version, customers can order a printed edition at a reduced rate. Authors retain copyright. The default Creative Commons Attribution (CC BY) 4.0 International License facilitates free re-use and sharing.
