## Assignment 7

## Oral questions

No oral questions assigned due to the upcoming midterm.

## Questions to be answered in writing

1. Let $a$ and $b$ the side lengths of a parallelogram, and $c$ and $d$ the lengths of its diagonals. Prove that $2\left(a^{2}+b^{2}\right)=$ $c^{2}+d^{2}$. (In other words, the sum of the lengths of the squares of the diagonals equals the sum of the squares of the side lengths.)
2. 4.4/8 (Angle bisector theorem)
3. Use the picture below to find an exact formula for $\cos \left(72^{\circ}\right)=x / 2$.

Prove your claim using similarity of triangles and the angle bisector theorem.
