The first 9 problems count 6 points each and the final ones counts as marked. Problems 1 through 4 are multiple choice. In the multiple choice section, circle the correct choice (or choices). You do not need to show your work on problems 1 through 4, but you must show your work on the other problems. The total number of points available is 106.

4. Suppose the functions  $f$  and  $g$  have derivatives at all their domain points and their values at certain points are given in the table. The next four problems refer to these functions  $f$  and  $g$ . Recall that, for example, the entry 1 in the first row and third column means that  $f'(0) = 1$ . In each case, a function  $H(x)$  is given in terms of  $f(x)$  and  $g(x)$ . You are asked to find  $H'(x)$  at the value of  $x$  provided.
